

Amendment to the Specification

Please replace the paragraph at page 13, lines 13-19 with the following amended paragraph.

The back wall 522 includes recesses 510, 511 which extend horizontally along a portion of the back wall. Recesses 510, 511 are spaced apart and are defined in part by excurve cylindrical elements 512, 513, respectively, and by incurvate surfaces 530, 532, respectively, as shown in the cross-sectional view of FIG. 14. The excurve cylindrical elements 512, 513 are longitudinal sections of a cylinder. The excurvatures of the excurve cylindrical elements are coaxial with an axis lying between the recesses and oriented in a transverse relationship to the rear wall [[.]], that is, the axis of the curvate surfaces is essentially parallel to the rear wall, as shown in Fig. 14.
